SKILLS

LANGUAGES & FRAMEWORKS

TypeScript, JavaScript, PHP, React, React Native, Node.js

COMMERCE & ARCHITECTURE

Headless Commerce, Vendure, GraphQL, API Design, Software Architecture

TOOLING & CI/CD

Nx (Monorepo), Yarn 4, Vite, GitHub Actions, WordPress Plugin Dev

DATA & STATE

TanStack Query, TanStack Router

PRACTICES

Full-Stack Development, Agile/Scrum, DX, Docs-as-Code

LANGUAGES

Swedish — Native

English — Full Professional

Somali — Native

CERTIFICATES

- Professional Scrum Master™ I
- SAFe Practitioner (certification lapsed)

EDUCATION

Linköping University

M.S. Media Technology & Engineering

Aug 2015 – Dec 2020

Master's thesis for the OpenSpace project (NASA-funded open-source astronomy visualization) with the University of Utah's SCI Institute. Me and my thesis partner built a messaging protocol in C++/OpenGL for tool interoperability, plus a Python test plugin for the Glue toolkit.

EXPERIENCE

Haus Tech — Full-Stack Developer Mar 2025 – Present

Full-stack developer working across headless commerce, WordPress plugin development, and internal dev-tooling infrastructure. Core projects include:

Haus Storefront Components

- Contributed to migrating an e-commerce component library to a headless architecture, decoupling business logic/state from UI to support multiple storefront frontends.
- Maintain and extend a TypeScript/React & React Native monorepo (Nx, Yarn 4)
- Build cross-platform (web + native) commerce components using TanStack Query (web + native) and TanStack Router (web), an event-bus pattern for cross-component state, and SSR-safe data-layer design.
- Designed and maintain the package documentation system: README structure/template used across all ~23 packages, mock-data and live-preview examples, and a CI-driven sync pipeline to a public Docusaurus site.

Stack: TypeScript, React, React Native, Expo, Nx, Yarn 4, TanStack Query/Router, GraphQL, Vendure

Haus Storefront Elementor Widgets

- Sole developer through the initial build of a WordPress plugin exposing ~30 Elementor widgets (cart, checkout, product discovery, auth) backed by a React 19 runtime and a headless Vendure GraphQL commerce API; continued ownership of core integration as the team scaled.
- Built the data-provider layer mapping WordPress admin settings into a typed Vendure client configuration, wired Stripe payments, and set up i18next-based translations with an auditable migration system.
- Built a standalone React admin SPA for merchants to configure API credentials, theming, and feature flags outside the WordPress admin UI.

Stack: PHP 8.1, TypeScript, React 19, Vite, GraphQL, Stripe, WordPress/Elementor, TanStack Query, Radix UI

haus-workflow

- Created and maintain an internal ai agent harness system/skills library
- Architected a scan → recommend → apply pipeline in TypeScript/Node.js: a data-driven detection-registry infers repo stack/role/dependency signals, feeding a binary policy-gate recommendation engine that resolves against an externally versioned content catalog.
- Designed and maintain a companion catalog repository — a JSON-schema-validated manifest with provenance tracking, its own CI validation gate, and a Docusaurus documentation site.
- Built hash-based lockfile drift detection so managed config can be regenerated, pruned, or hand-edited without silently overwriting user changes.
- Implemented a security guard layer (bash command/file-access interception, permissions.deny derivation) and own the full release/CI pipeline across both repos.

Stack: TypeScript (strict), Node.js, Commander.js, JSON Schema, GitHub API, ESLint, c8 coverage

Also: migrated an 11-package Vendure-plugins monorepo from Lerna/Jest to Nx + Vitest; built and maintain the public Haus Tech docs hub (Docusaurus 3) syncing 6 source repos; and designed the shared dev-tooling config package that was later folded into haus-workflow.

Health & Well-Being — Career Break 2023 – 2025

- Took leave from full-time work for health reasons; returned to the workforce in March 2025 through a structured work-training placement at Haus Tech, arranged in cooperation between Arbetsförmedlingen (Swedish Public Employment Service) and Försäkringskassan (Swedish Social Insurance Agency).
- Progressively increased working hours from 25% to full-time (100%).
- Functioned as a full member of the development team throughout. Besides my individual project development I've been participating in daily stand-ups, agile team work, customer projects, and project planning.

Vogue Scandinavia — Frontend Developer Aug 2022 – Jan 2023

- Joined an early-stage media startup (Vogue's Nordic edition) as its first in-house developer, brought in to move frontend development in-house from an outsourced Stockholm dev team.
- Built and maintained the digital platform in React, Next.js, and Redux, working across UX, CMS-managed content (Strapi), REST API integration, and site analytics, in close collaboration with the creative and commercial teams.

Stack: React.js, Next.js, Redux, JavaScript, HTML, CSS, Sass, Tailwind CSS, Strapi (headless CMS), REST APIs, Google Analytics, Google Ads

Capgemini — Software Engineer *Feb 2021 – Jul 2022*

- Ignite Graduate Program, focused on Innovative Tech & Digital Customer Experience; worked across internal and external assignments.
- Client placement at Telia (Jun 2021 – Jul 2022) on a Capgemini DevOps delivery team, building and maintaining Telia's internal order-management applications inside a large SAFe Agile Release Train.
- As Junior Developer and Junior Testing & Quality Specialist, contributed across development while owning much of the testing and quality work (manual and automated); joined at project inception, helping establish the project structure and running knowledge transfer from the previous development team.

Stack: *JavaScript, JSP, Java, Spring MVC, SQL, Regression Testing, Agile/SAFe*

EARLIER EXPERIENCE

We Know IT — Web Development Consultant *Mar 2020 – Nov 2020*

Built and edited client websites to spec at a student-run consultancy, working solo and in teams with regular client contact (JavaScript, HTML, CSS, WordPress).

Linköping Science Park — Code Summer Camp Coach *Jun 2019 – Jul 2019*

Coached 120 children (ages 7–17) in programming and problem-solving, leading hands-on workshops at Code Summer Camp (JavaScript, HTML, CSS, Unity, Scratch).

The Summer Match — App Developer *Jun 2018 – Aug 2018*

Built the first version of a risk-analysis app for an industrial research project via LiU Innovation, delivered as a working proof of concept (React Native).

Linköping University — Web Developer *Dec 2017 – Mar 2018*

Built a new website for the Social and Cultural Analysis program as project manager and developer, on WordPress so non-technical students could maintain it (HTML, CSS, WordPress).
