SKILLS

LANGUAGES & FRAMEWORKS

TypeScript, JavaScript, React, React Native, Node.js, PHP

ARCHITECTURE & APIS

Headless Commerce, GraphQL, REST APIs, API Design, WordPress/Elementor

DEVELOPER TOOLING & AI

AI-Assisted Development, CLI Development, Developer Experience (DX), Nx/Monorepos, GitHub Actions/Apps, Docs-as-Code

LANGUAGES

Swedish — Native
English — Full professional proficiency
Somali — Native

CERTIFICATES

- Professional Scrum Master™ I (PSM I)

EDUCATION

Linköping University 2015 – 2020

M.S. Media Technology & Engineering

Master's thesis for OpenSpace, a NASA-funded open-source astronomy visualisation project, in collaboration with the University of Utah's SCI Institute. Developed a C++/OpenGL protocol for communication between visualisation tools and OpenSpace, along with a Python integration plugin for Glue, an astronomy data visualisation and analysis tool.

EXPERIENCE

Haus Tech — Full-Stack Developer Mar 2025 – Present

Full-stack developer working across headless commerce, WordPress plugin development, and developer infrastructure for AI-assisted development. Core projects include:

Haus Workflow

- Created and maintain internal tooling for AI coding agents, combining a CLI with a versioned content catalog to provide accurate, project-specific context across repositories.
- Architected a TypeScript/Node.js pipeline that scans repositories, identifies their stack and structure, and automatically recommends and installs the appropriate agent configuration.
- Designed the companion content catalog, now containing 150+ validated items with source tracking, automated upstream syncing, and CI validation.
- Built safeguards for managing generated configuration, including change detection that protects developers' manual edits and security controls around agent command and file access.
- Own the release and CI infrastructure across both projects, including cross-repository validation, drift detection, live-catalog testing, and GitHub App authentication.

Stack: TypeScript, Node.js, esbuild, JSON Schema, GitHub API/Apps, git worktrees, Lefthook, c8, release-it

Haus Storefront Elementor Widgets

- Sole developer through the initial build of a WordPress/Elementor commerce plugin with ~30 React-powered widgets covering cart, checkout, product discovery, and authentication, backed by a headless Vendure GraphQL API.
- Built the integration layer connecting WordPress configuration with the Vendure storefront, including Stripe payments and an i18next-based translation system with versioned migrations.
- Built a standalone React admin app for merchants to manage API credentials, theming, and feature settings outside the standard WordPress admin UI.

Stack: PHP, TypeScript, React 19, Vite, GraphQL, Stripe, WordPress/Elementor, TanStack Query, Radix UI

Haus Storefront Components

- Helped migrate and now maintain a TypeScript/React and React Native commerce library, separating business logic and state from the UI to support multiple storefront frontends.
- Build cross-platform commerce components for web and React Native, with shared data/state management and SSR-compatible architecture.
- Designed and maintain the documentation system used across ~23 packages, including standardized READMEs, interactive examples, and a CI-driven pipeline that publishes package documentation to the public Docusaurus site.

Stack: TypeScript, React, React Native, Expo, Nx, Yarn 4, TanStack Query/Router, GraphQL, Vendure

Also: Migrated an 11-package Vendure plugin monorepo from Lerna/Jest to Nx/Vitest; built and maintain the Haus Tech documentation hub, automatically syncing documentation across 6 source repositories; and created a shared developer-tooling configuration package later integrated into Haus Workflow.

Health & Well-Being — Career Break 2023 – 2025

- Took a career break before returning to software development through a structured work-training placement at Haus Tech.
- Progressed back to full-time work while contributing as a member of the development team across individual projects, customer work, agile collaboration, and project planning.

Vogue Scandinavia — Frontend Developer Aug 2022 – Jan 2023

- Joined Vogue's Nordic edition as its first in-house developer, taking over frontend development from an outsourced team.
- Built and maintained the React/Next.js digital platform, working across UX, CMS and API integrations, and analytics in close collaboration with creative and commercial teams.

Stack: React.js, Next.js, Redux, JavaScript, HTML, CSS, Sass, Tailwind CSS, Strapi (headless CMS), REST APIs, Google Analytics, Google Ads

Capgemini — Software Engineer *Feb 2021 – Jul 2022*

- Joined through Capgemini's Ignite Graduate Program, working across internal and client assignments.
- Spent most of my time on a DevOps delivery team at Telia, building and maintaining internal order-management applications.
- Joined the project at inception, helping establish the project structure, contributing across development while taking significant ownership of manual and automated testing and quality assurance.

Stack: *JavaScript, JSP, Java, Spring MVC, SQL, Regression Testing, Agile/SAFe*

EARLIER EXPERIENCE

We Know IT — Web Development Consultant *Mar 2020 – Nov 2020*

Built and maintained client websites at a student-run consultancy, working independently and in teams with regular client contact (JavaScript, HTML, CSS, WordPress).

Linköping Science Park — Code Summer Camp Coach *Jun 2019 – Jul 2019*

Coached 120 children (ages 7–17) in programming and problem-solving, leading hands-on workshops at Code Summer Camp (JavaScript, HTML, CSS, Unity, Scratch).

The Summer Match — App Developer *Jun 2018 – Aug 2018*

Built the first version of a React Native risk-analysis app for an industrial research project through LiU Innovation, delivering a working proof of concept.

Linköping University — Web Developer *Dec 2017 – Mar 2018*

Managed and developed a new WordPress website for the Social and Cultural Analysis program, designed to be maintained by non-technical students (HTML, CSS, WordPress).
